Summary

Fresh out of grad school, I'm looking for something interesting to do, anything between software engineering and devops would be of interest. I have nothing to list for professional experience, and they aren't the core of my degrees, but I am fairly confident in my programming abilities, especially in Go, and am well acquainted with the modern cloud-native tech stack.

Skills

Technologies

Strong knowledge: Go, Bash, Docker, Kubernetes, GCP, Linux administration, CI/CD

Working knowledge: C/C++, gRPC, SQL, AWS, CISCO IOS, Junos OS

Spoken Languages

English, Chinese (Mandarin, Traditional)

Education

University of Amsterdam / MSc Security & Network Engineering
2019 - 2020 Amsterdam, Netherlands

National Taiwan University / BBA Information Management
2014 - 2018 Taipei, Taiwan

Other

Most of my projects can be found on GitHub @seankhliao or archived @erred, my two long running ones are:

seankhliao.com

My site/blog where I keep track of various things I researched and also at various times a platform to experiment with web features, such as analytics, CSP, AMP, SXG, WebPackage

github.com/seankhliao/kluster

Experiments with Infrastructure as Code (IaC) in a Kubernetes setting, also config/deployment files for various services.
